### Table Notes

1. This data is a compilation from data provided by Global Affairs Canada (May 2020) and Recent Announcements at <https://climate-change.canada.ca/finance/RecentAnnouncements-AnnoncesRecentes.aspx>.
2. Allocations between adaptation and mitigation are based on GAC information. Where a project is coded to both, the budget is divided equally. Contributions to the Green Climate Fund and Canada's special private sector funds at the various Multilateral Development Banks are allocated based on the actual experience of project disbursements from these funds that are publicly accessible as of June 2020.
3. Canada's biennial reports to the UNFCCC are more comprehensive as they include bilateral climate finance, both principal purpose and significant purpose. Canada adjusts significant purpose climate finance budgets to 30%. The latest Report is available at [https://unfccc.int/sites/default/files/resource/br4\\_final\\_en.pdf](https://unfccc.int/sites/default/files/resource/br4_final_en.pdf) and Statistical Table 7 at <https://unfccc.int/documents/208400>.
4. The replenishments of core financing for multilateral institutions are not included in Canada's accountability for its \$2.65 billion commitment, nor in C4D's analysis of climate finance, with the exception of the Global Environment Fund and IFAD. However, the climate relevant share of these replenishments are reported by Canada to the UNFCCC in its biannual reports, based on the OECD DAC's calculation of the climate relevant share for each of these financial institutions.
